At [redacted] request we have prepared a cost estimate to cover the modification of a tracker for use in the driver training on the new vehicle. This proposal does not consider mounts, windows, or equipment other than the Model 501 tracker modified to provide an optical system for infinity focus without a dome, and increasing the I.M.C. amplitude for greater V/H rates. The tracker will be identical and parts will be interchangeable with present trackers except for some I.M.C. parts and the optical system. Outline drawing #501-0058 will provide information regarding outline dimensions and outline data.

Our proposal is based on a fixed-price contract and permission to use existing tooling and equipment available from previous and present contracts. We would suggest a contract which provides separately

25X1A

[redacted]

Delivery could begin six months after receipt of a contract or authorization to proceed - at a rate of one per month in the case of three units and at the rate of two per month in the case of ten units.

If you have any questions or require additional information, please contact me.
